

Impact Of Climate Change – Nurses Accountability

Ms. N. Subhashini

Abstract:

Weather is considered to be the atmospheric conditions that are happening now or within a few weeks. On the other hand climate represents the long term atmospheric patterns within which weather occurs. Extreme heat already threatens the health of local communities, who suffer dehydration, heat Cramps, heat exhaustion, heat syncope or heat stroke, and even heat-related death. Climate change will only intensify extreme heat events Nurses are uniquely qualified to bring information on climate change to the public. They have both the necessary scientific background and the communication skills to get the message across in an understandable way. Their expertise in health promotion and behavior change also equips them to foster life style choices that will decrease green house gasses (GHG) emissions by individual, families and Communities. Greenhouse effect is a process by which radioactive energy leaving a planetary surface is absorbed by some atmospheric gases called greenhouse gases

Keywords: Weather, Greenhouse effect, Green house gases
