

MARFAN SYNDROME

Ms.M. Senthila Shunmuga Lakshmi Asst. Prof. M.Sc (N) Narayana College of Nursing, Nellore.

Abstract: WHAT IT IS ? Marfan syndrome (MFS) is an autosomal dominant heritable disorder of connective tissue that involves primarily the skeletal, ocular, and cardiovascular systems. Connective tissue supports many parts of your body. It is a type of “glue” between cells that: P Helps bring nutrients to the tissues P Gives tissues form and strength P Helps some tissues do their work
